

Testimonials

My number one priority as a farmer is soil and crop health, that is why I switched to PowerRich! I love their products and use them all, starting with PowerRoot seed treat that promotes fast germination. High quality fertilizer that I only need to put down 25 or 30lbs/ac plus my nitrogen. I handle it in bulk bags to save my augers and bins, I just dump in 2 bags of dust free quality fertilizer and can seed all day on that, it is put with seed for easy access. I also use their foliar products with my herbicide or fungicide that gives my crops a shot of nutrients and improves herbicide uptake and safety to crops. My neighbors are always commenting on my healthy crops. They deliver all products to my farm free of charge and have always been treated well by my agent and PowerRich!

Wes Holte from Provost, AB.

Customer since 2016

Now working with PowerRich fertilizer over the last couple seasons I have noticed how well the product handles. With low dust, little to no caking in storage bins, and approximately half the volume increasing efficiency on farms. PowerRich fertilizer delivered direct to farm with no added cost is another + because it saves the farmer the stress of hauling it home. Being that PowerRich is a high quality fertilizer you know what to expect every time it shows up at your farm.

Reece Weiman, Agronomist from Chauvin, AB

Customer since 2022

Since 1984, when PowerRich pioneered the use of micronutrients in granular phos fertilizer, it's always been about balance. Today, the practice of balanced fertilization including all the nutrients a plant needs, is more important than ever in maximizing crop production while maintaining soil fertility.

We have always recognized the importance of micronutrients and the role they play in overall soil health. In addition to improving the efficiency of nitrogen, phosphorus, and other macronutrients along with helping chemical uptake. PowerRich customers have seen the benefits. With healthier plants, improved nutrient stock and an increase in organic matter due to larger root systems, our low salt blends aid in lowering Ph and help build your soil and improved long term fertility.

At PowerRich, we believe it is better to prevent nutrient deficiencies than to try and correct them after symptoms appear.

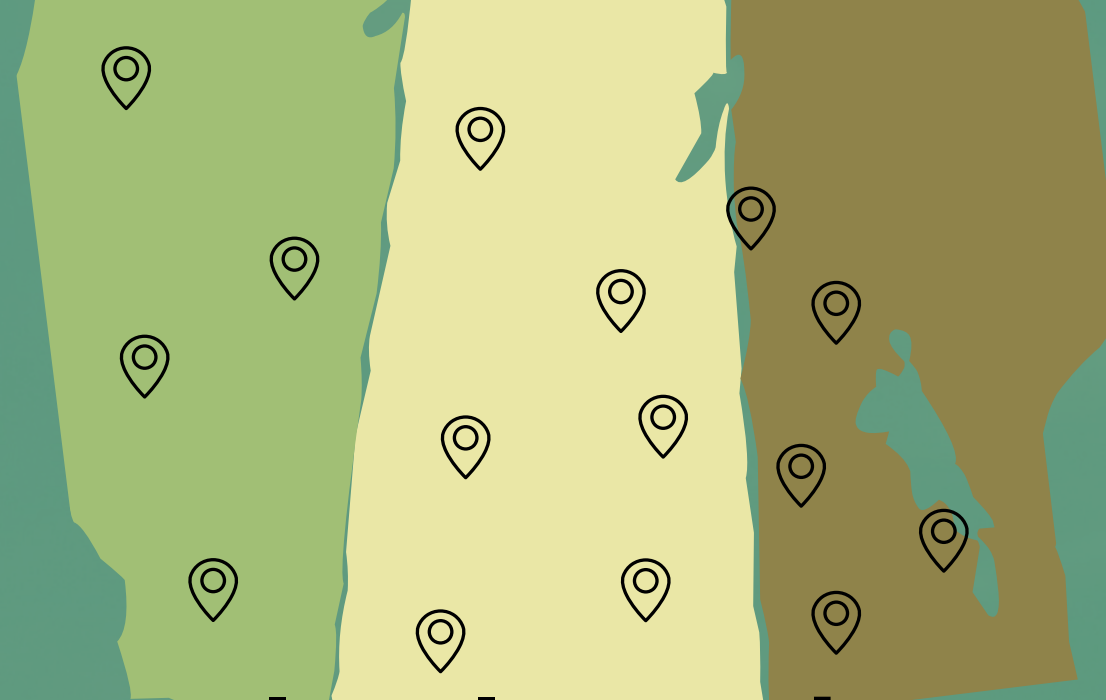

Our seed treatment, granular and foliar fertilizers work together to offer a complete nutrient program that is non-toxic to the seed, the plant, and most importantly, the soil.

POWERROOT SEED TREATMENT

1-2-1

Quick starts are critical. Applied directly to the seed, PowerRoot stimulates life in the rhizosphere, where precious nutrients are utilized and stored.

As your seed begins to sprout, the full spectrum of nutrients in PowerRoot are made available for use by your germinating crop.

POWERPAK STARTER FERTILIZER

Engineered to breakdown, remain available longer and extend phos uptake
